

AMENDMENTS TO THE CLAIMS

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A computer implemented method to provide a home page identifier to a client computing device, the method comprising:
receiving, over a computer network, at a redirection web site, a home page request from the client computing device, the home page request including a user identifier that identifies a user of the client device, wherein the redirection web site performs the steps including:
obtaining a timestamp identifying a current time and a current day;
obtaining one or more network connection identifiers that identify one or more computer networks to which the client computing device is connected from the home page request;
retrieving, from a nonvolatile storage device, [[a]]
the home page identifier based upon the timestamp, wherein the retrieving further comprises:
selecting, from the nonvolatile storage device, one or more records that correspond to the user identifier, wherein the nonvolatile storage device includes records for a plurality of user identifiers; and

identifying, from the group of selected records,
the home page identifier based upon the
obtained timestamp and the obtained network
connection identifiers; and

setting a browser's home page to the retrieved home
page identifier, wherein the setting of the
browser's home page includes redirecting the
browser executing on the client computing device
to the retrieved home page identifier.

2. (canceled)

3. (canceled)

4. (canceled)

5. (currently amended) The computer implemented method of claim [[3]] 1 wherein the obtaining of the timestamp includes retrieving a current timestamp from the home page request, wherein the current timestamp corresponds to the current time and the current day at the client computing device.

6. (canceled)

7. (canceled)

8. (currently amended) An information handling system to
provide a home page identifier to a client computing
device, the information handling system comprising:
one or more processors;
a memory accessible by the processors;
a nonvolatile storage device;

one or more network adapters connecting the information handling system to one or more computer networks; and an home page selection tool for selecting [[a]] the home page, the home page selection tool including a plurality of instructions stored in the memory and executed by at least one of the processors to perform actions comprising:

receiving, at one of the network adapters over the computer network, a home page request from the client computing device, the home page request including a user identifier that identifies a user of the client device, wherein the information handling system is a redirection web server that performs the steps including:

means for obtaining a timestamp identifying a current time and a current day;

obtaining one or more network connection identifiers that identify one or more computer networks to which the client computing device is connected from the home page request;

means for retrieving, from the nonvolatile storage device, a home page identifier based upon the timestamp, wherein the retrieving further comprises:

selecting, from the nonvolatile storage device, one or more records that correspond to the user identifier,

wherein the nonvolatile storage device

includes records for a plurality of user identifiers; and
identifying, from the group of selected records,
the home page identifier based upon the obtained timestamp and the obtained network connection identifiers; and
means for setting a browser's home page to the retrieved home page identifier, wherein the setting of the browser's home page includes redirecting the browser executing on the client computing device to the retrieved home page identifier.

9. (canceled)

10. (canceled)

11. (canceled)

12. (currently amended) The information handling system of claim [[10]] 8 wherein the means for step of obtaining of the timestamp includes means for a step of retrieving a current timestamp from the home page request, wherein the current timestamp corresponds to the current time and the current day at the client computing device.

13. (canceled)

14. (currently amended) A computer program product stored on a computer operable media readable medium comprising computer instructions that, when executed by an information handling system, cause the information handling system to

perform actions to provide a home page identifier to a client computing device, the method comprising:
receiving, over a computer network, at the information handling system that is a redirection web server, a home page request from the client computing device, the home page request including a user identifier that identifies a user of the client device, wherein the redirection web site performs the steps including:
~~means for~~ obtaining a timestamp identifying a current time and a current day;
obtaining one or more network connection identifiers that identify one or more computer networks to which the client computing device is connected from the home page request;
~~means for~~ retrieving, from a nonvolatile storage device, [[a]] the home page identifier based upon the timestamp, wherein the retrieving further comprises: selecting, from the nonvolatile storage device, one or more records that correspond to the user identifier, wherein the nonvolatile storage device includes records for a plurality of user identifiers; and
identifying, from the group of selected records, the home page identifier based upon the obtained timestamp and the obtained network connection identifiers; and
~~means for~~ setting a browser's home page to the retrieved home page identifier, wherein the setting of the browser's home page includes redirecting the browser

executing on the client computing device to the retrieved home page identifier.

15. (canceled)

16. (canceled)

17. (canceled)

18. (currently amended) The computer program product of claim [[16]] 14 wherein the action of means for obtaining the timestamp includes means for an action of retrieving a current timestamp from the home page request, wherein the current timestamp corresponds to the current time and the current day at the client computing device.

19. (canceled)

20. (canceled)
